Chapter 3 .....

Chapter 4 .....

**Congratulations on completing PWA-I Quiz!!**

**NOTE:** To see which questions were “correct” vs. “incorrect”, scroll down and click the “**VIEW QUESTIONS**” button

Once you have clicked on the “VIEW QUESTIONS” button below and you are SATISFIED with the results, click the “**VIEW QUESTIONS**” button

assessment, please be sure to TAKE your results on this page and post it for credit.

### **REMINDERS:**

- For directions on how to take a screenshot please visit this website: <http://screenshot.org/>
- You may RE-TAKE it multiple times
- You must submit a “SCREENSHOT” of your results (*–showing your FSO Student ID*) to receive credit!

Thanks, ~Fia

**RESTART QUIZ**

**VIEW QUESTIONS**

### **Category: Chapter 3**

TRUE or FALSE: Calling a function and a function are not the same thing.

1. ☐ True

2. ☒ False

**Incorrect**

### **Category: Chapter 3**

TRUE or FALSE: A function cannot return the return statement.

1. ☐ True

2. ☒ False

Correct

### Category: Chapter 3

TRUE or FALSE: It is good to enclose a function in non-curly braces.

1. ☐ True

2. ☒ False

Correct

### Category: Chapter 3

TRUE or FALSE: If you forget to declare a variable using var, that variable will be globally defined, with unintended consequences in your program.

1. ☒ True

2. ☐ False

Correct

### Category: Chapter 3

TRUE or FALSE: Variables are either global (visible everywhere in your program) or local (visible only in the function where they are declared).

1. ☒ True

2. ☐ False

**Correct**

### Category: Chapter 3

TRUE or FALSE: A function creates parameters and any local variables

1. ☒ True

2. ☐ False

**Correct**

### Category: Chapter 4

TRUE or FALSE: Arrays are a data structure for storing data.

1. ☒ True

2. ☐ False

**Correct**

### Category: Chapter 4

TRUE or FALSE: You should not use the `new` notation to create new array.

1. ☐ True

2. ☒ False

Correct

**Category: Chapter 4**

TRUE or FALSE: A for loop package initialization, a conditional test, and into one statement.

1. ☒ True

2. ☐ False

Correct

**Category: Chapter 4**

TRUE or FALSE: You can use a value array item.

1. ☒ True

2. ☐ False

Correct

**Category: Chapter 4**

TRUE or FALSE: Assigning a value to doesn't exist in the array will create array.

1. ☒ True

2. ☐ False

Correct

#### Category: Chapter 4

TRUE or FALSE: You cannot add a new element to an array using push.

1. ☐ True

2. ☒ False

Correct

#### Category: Chapter 4

TRUE or FALSE: You can create an array in JavaScript using `myArray = [ ]`;

1. ☒ True

2. ☐ False

Correct

#### Category: Chapter 2

TRUE or FALSE: In Chapter 2, we used `prompt` to get input from the user, and `confirm` to prompt to display a message in the battleship game in the browser.

1. ☐ True

2. ☒ False

Correct

### Category: Chapter 2

TRUE or FALSE: Before you begin writing code, it is not a good idea to sketch out what you want to do with pseudocode.

1. ☐ True

2. ☒ False

Correct

### Category: Chapter 2

TRUE or FALSE: You cannot use a function to control the logic of JavaScript program and to call points and actions.

1. ☐ True

2. ☒ False

Correct

### Category: Chapter 2

TRUE or FALSE: Logical operators can be used to combine values. For example `true || false` results in `true` and `true && false` results in `false`.

1. ☒ True

2. ☐ False

Correct

### Category: Chapter 2

TRUE or FALSE: Pseudocode is not what your real code should do.

1. ☐ True

2. ☒ False

Correct

### Category: Chapter 2

TRUE or FALSE: The `Math.floor` rounds a number to the nearest integer.

1. ☐ True

2. ☒ False

Correct

### Category: Chapter 2

TRUE or FALSE: There are two kinds of operators: comparison operators and arithmetic operators. When used in an expression, booleans evaluate to a true or false value.

1. ☒ True

2. ☐ False

Correct

Category: ADDIO

TRUE or FALSE: Design is the 3rd phase of the web development process.

1. ☐ True

2. ☒ False

Correct

Category: ADDIO

TRUE or FALSE: ADDIO is a web development process that contains six (6) phases.

1. ☐ True

2. ☒ False

Correct

Category: Chapter 1

TRUE or FALSE: if/else statements make decisions in your code.

1. ☐ True

2. ☒ False

Correct

### Category: Chapter 1

TRUE or FALSE: JavaScript declares the content of your page; HTML controls the behavior to your page.

1. ☐ True

2. ☒ False

Correct

### Category: Chapter 1

TRUE or FALSE: JavaScript is not used to web pages.

1. ☐ True

2. ☒ False

Correct

### Category: Chapter 1

TRUE or FALSE: One of the most common statements is a variable declaration using the keyword to declare a new variable and the operator, =, to assign a value to it.

1. ☒ True

2. ☐ False

Correct

Category: Chapter 1

TRUE or FALSE: You can add JavaScript to a web page using the script tag element.

1. ☒ True

2. ☐ False

Correct

Category: Chapter 1

TRUE or FALSE: You should use `alert()` to display messages to the user. `console.log` is used to display messages to the console.

1. ☐ True

2. ☒ False

Incorrect

Category: Chapter 1

TRUE or FALSE: You should use `var` when naming variables.

1. ☐ True

2. ☒ False

Correct

### Category: Chapter 1

TRUE or FALSE: Browser engines are executing JavaScript faster than they were 10 years ago.

1. ☐ True

2. ☒ False

Correct
